Linguistics 103: Psycholinguistics

TICKET #1283

ONLINE ASYNCHRONOUS

Instructor: Ashley Gipp

Learn about:

- How the mind comprehends and produces speech
- Which parts of the brain are involved in language
- Why bilingualism is good for the brain
- How children learn their first language
- What causes language disorders and how they can be treated
- How human language is different from animal communication and Generative Artificial Intelligence (Gen-AI)

LING 103 focuses on the current study of language and the mind with emphasis on the cultural and biological aspects of language, first language and second language acquisition, and bilingualism. More recent topics include technologies such as gen-AI, natural language processing, and their implications for psycholinguistics.

Lecture 3 hours. **Recommended Preparation:** ENGL 101 or ESL 151.

Transfer Credit: CSU, UC, USC
